

DNA DAY

***DNA Educator Symposium
Saturday, March 6, 2010
9am-5pm, Amgen Seattle***

Registration Opens January 25 at:
<http://www.nwabr.org/education/dnaleap.html>

Middle and high school science teachers are invited to join us for a special professional development day presented by the **DNA Life Sciences Education Advancement Partnership (DNA-LEAP)**! Come and learn about genetic resources available through some of the Northwest's most highly recognized outreach organizations. Separate 'tracks' are available for the middle school/introductory level and the high school level. Each participant will participate in four different 1-hour sessions and learn about the resources offered by all the participating outreach groups. We are excited to announce **Edward Ramos**, Ph.D., research fellow and a science policy analyst at the National Human Genome Research Institute (NHGRI), National Institutes of Health, as our keynote speaker.

Space is limited to the first 40 applications. Educators who work with students from backgrounds underrepresented in science are especially encouraged to apply. A complimentary lunch will be provided and clock hours will be available for purchase.

Professional development sessions will be offered by:

Fred Hutchinson Cancer Research Center, Science Education Partnership
Northwest Association for Biomedical Research
Seattle Biomedical Research Institute, BioQuest
University of Washington, Department of Genome Sciences Education Outreach

Northwest Association for Biomedical Research
