

Dr. Dankwa received her B.A. in Biological Chemistry at Wellesley College. Her interest in infectious diseases and human health led her to the Harvard T.H. Chan School of Public Health where she obtained her Ph.D. in Biological Sciences in Public Health. Her doctoral research focused on human malaria infection caused by a malaria parasite that naturally infects macaques in Southeast Asia. She is currently a Postdoctoral Fellow at Seattle Children's Research Institute, at the Center for Global Infectious Disease Research. Her current research seeks to better understand vascular dysfunction in cerebral malaria and ways to fix it.
