NORTHWEST ASSOCIATION FOR BIOMEDICAL RESEARCH

## Sero-segregation: Access and equity in HIV prevention and treatment

More than 35 years have passed since scientists first identified HIV. Join us to learn about progress in HIV biomedical research and to discuss ongoing challenges in access and equity

- Should HIV prevention drugs be freely available?
- Should access to HIV medications be treated differently than access to medications for other serious chronic illnesses?
- In the US, how is the current conversation around social and political justice affecting equitable access to these medications?

Facilitated by **Brian Minalga**, Office of HIV/AIDS Network Coordination@ *Fred Hutchinson Cancer Research Center*

**May 30, 2017 5:45 - 7:30 p.m.**

Kakao Chocolate+Coffee  
415 Westlake Ave. N., Seattle, WA 98109

**\$5** NWABR members and students **\$10** General admission  
Includes discussion, snacks, espresso and first glass of wine/beer if 21+  
REGISTER at <http://www.nwabr.org/conversation/seattle>

### What are Community Conversations?

Each informal Conversation explores a topic in biomedical science and its relationship with ethics, medicine, research and society, connecting people to the biomedical research community. Learning from each other, our goal is to help people thoughtfully engage in and advance biomedical research. Everyone is welcome. No science background necessary. In partnership with Union and 415 Westlake.
