

Kelly Morrisroe is a Research Scientist at the University of Washington, specializing in behavior of non-human primates. She is also a UW graduate with a Bachelor of Science degree in psychology as well as a certificate in applied animal behavior. In her current position as animal trainer for the Washington National Primate Research Center, she teaches research, veterinary and husbandry staff how to use positive reinforcement to help the monkeys understand what we need them to do for research. Using positive reinforcement she has trained monkeys to do everything from offering a leg for a blood draw, to playing video games in virtual reality. Outside of work Kelly's passion for training continues with her own animals as she trains her dogs for competitive sports like Obedience, Agility and Protection work.
